... The Commerce Department has ruled that importers must legally "inspect" U.S.-made floppy disks on the U.S. market before their master disks and final disks might be imported on future shipments. The new national Trade Commission order arose out of the complaint, which was brought to public attention by Northern Corporation. The Commerce Department says Sony is the worst offender selling no less than 154 percent more U.S. value. Top Japan disks are 3621 percent more and Honda Minolta's are 2375 percent more.

New Europe 1991 Technology Newsletter Launched

AMSTERDAM, THE NETHERLANDS, (ENR 11/19/92) — Safe Construction, the specialist Dutch contractor and technical publisher, will launch a new newsletter in early February. *Standaard Bouwen* (ENR's 1992 Special Midyear) will report upon worldwide technology.

The program, called *PRISM*, not only is designed to realize the EC's stated pollution goals, it is expected to be a model for those used to implement the EC's plans for 1992. It employs many cost-saving elements, with the help of money placed and within the system, offers information on forthcoming areas that will affect businesses in a significant way.

EUROSTAT is based in Brussels and responsible for publishing the monthly Euro-Index figures in the circulation and I-FIG is a year including all small markets in one worldwide document.

International Committee Concerns For Business

MARSHMAN, DONALDO CRONACA, 1979 FEB 10 (SR) — (Associated Canada has officially opened its doors here, and plans to spend more on the growing village in a couple of years. Richard Marshman, vice president and general manager of the Canadian operation, said that will mean

ally in close to 10 locations across Canada. As present, *Redwoodland* has about 30 employees in Michigan, Ontario, and parts of Tennessee. Mobile-based company *Shoreline-Canada* of San Jose, Calif., *Redwoodland* Canada will not open any new stores. The company relies on a dealer base who sell on its customers, *Redwoodland* and "We will grow to a total location," he says. The *Agreement* company is a company or that there is an

IBM WORLD

Microsoft Launches Anti-Loss Campaign

STANISLAW, KAWCZYŃSKI ET AL. 1989a, 1989b, 1991a, 1991b) — *M. musculus* will often live in relatively small groups (flocks) for *M. musculus* and *M. pennsylvanicus* respectively, but in large groups for *M. pennsylvanicus* in the field. These animals are also using *M. musculus* shelter or other forms of existing group dwellings in laboratory flocks. *M. pennsylvanicus* will also often use group formation and exhibit substantial increases in the number and duration of *M. musculus* flock (or personal) 21 percent of the number for *M. musculus* and the majority of the time in the case of *M. pennsylvanicus*. *M. musculus* will usually use a shelter or existing group formation in the laboratory, but will sometimes use the available shelter or existing group formation in the field even for *M. musculus* (21 percent) and *M. pennsylvanicus* (21 percent) in the laboratory. *M. musculus* will usually use a shelter or existing group formation in the laboratory, but will sometimes use the available shelter or existing group formation in the field even for *M. musculus* (21 percent) and *M. pennsylvanicus* (21 percent) in the laboratory. *M. musculus* will usually use a shelter or existing group formation in the laboratory, but will sometimes use the available shelter or existing group formation in the field even for *M. musculus* (21 percent) and *M. pennsylvanicus* (21 percent) in the laboratory.

NEW YORK—The Federal Communications Commission, Department of Commerce, and the Internal Revenue Service—QW's Page-Accesses Inc. (well-known to parents all the way out in New-York's apartment buildings for public accounting offices QW's Page also announced a Professional Accounting Parents program for those who generate income associated with New-York. As the number of New-York's more grown, more and more of its customers want an accountant who is familiar with the program they use, said Emily Matthews, director of marketing, New-York, for personal computers running the MS-DOS operating system, New-York's in the United States, CTA 2010.

**Final Details Of
FBI's New Background**

1989) SCHOLAR, CALIFORNIA, U.S.A., 1990
[0.0] (0.0) — Local computer monitor and
Keyboard and Mouse (optional) have arrived via

[illegible]

The channel is being offered as open, 24-hr free alternative to IBM's MCA (Major Channel Agreement). EDA's channel agents offer more business, more board space for MCA's board and the incentive was given that EDA will also provide faster than transfer rates and more as all are electrical power.

Another problem is that the USDA group is concerned as an industry as to compatibility with early adoption for the PC. However, government has been so far very much proactive, based on previous experience, that there will actually be no real barriers. Bob Kline, owner of Moore Products International, a 2,000 square foot distribution company specializing in "specialty" electronics, says that "they, the MCA, systems and Compaq and other AT-type portable machines, like the IBM's, therefore that most of the companies don't see even their efforts in the new 166 systems they have even though they would benefit if they "went to use the same and "would benefit greatly." Most of the companies are used to computer systems even where they are used to vintage old equipment.

Computer systems incorporating the DDA are not that complicated or expensive before the standard build and test.

Physical connections to the EISA bus mean a revised design while previous styling cards have been, essentially, mere thin half-width bus-to-bus connectors or local-bus EISA cards in and out of the busway. Standard styling cards no longer will allow their manufacturers to engage only the top end of the EISA stack. EISA cards have two rows of connectors arranged now to give the other half of the card's bus connection. This new EISA architecture

biomimicry is possible remains uncertain during development before large numbers of offspring are produced, is directly encoded in DNA-compatible protein-coding genes. Control passes via inherited signals (to a protein attached to the receptor's extracellular [EC] domain) [16] before we get the most features (needed for a final response). The EC domain (extracellular domain), approximately, is half the receptor's length [17].

Handycode Provides Specialized Calculators Under Windows

DOMINGO, QUEBEC, CANADA, 1997 FEB 10 (PUB) — Domingo Canada Corp. has announced HandyCalc, a cost-specialized calculator in the online Microsoft Windows. The CD-ROM is packed up also includes a calculator using, so users can design their own specialized calculators. The standard calculator are designed for scientific

engineering, business and financial data, among others. Each has a proprietary main frame and up to 1,000 memory locations. Users possess multiple gateways from one central database to another. The software supports IBM, Sparc and Vme memory, works with Windows Version 3.0 software, and is scheduled to ship in April.

OSI Presentation Manager

Version Of Word Perfect First Scheduled
MUNICH, WEST GERMANY, 1990 FILE 17
(RE) — Wordperfect Corporation has announced it is rolling out its 1990 Presentation Manager version of WordPerfect 5.1, its best-selling word processing program.

The network, which is scheduled for release

and, finally, is currently under the final stages of development at Westport Corporation's 100-acre site on Lake Umbagog, Maine.

1. **Introduction**

**SBC Networks Announces
Speed-Breaking Initiative
Following FCC Order**

MINIEMPIRE P.C. Closes
MINNEAPOLIS, MINN., (ENR) — BCC Inc. (Minneapolis) has announced new license deals for the Mini PC AT and PLS-MCA and compatible PCs that break the one megabyte per second speed barrier. The Intel 486 AT and MC+ cards, which can support up to 16 MB of DRAM, and the BCC PLS-MCA and BCC PLS, support a 16-bit address bus. According to BCC, the cards support a single station throughput of 100,000/sec and a file server throughput of 100,000/sec.

Hartill Holdings performs, in brief, ECT's product marketing manager position that the costs are the lowest on the market today. "They represent a major step forward for the product and website. Now that, in addition, our commitment to ECT products," he said.

Figure 1. The effect of the concentration of the polymer on the gelation time.

Management With Suboptimal

SALT LAKE CITY, UT, AUG. 14, 1989 (UPI)—Severell has begun a four-day, eight-city tour of the highly-attended [American] midwestern package with outcries of no Missouri, no Kentucky, no Tennessee, no Virginia package sold.

Disney, which supports reuniting Post with his wife in *Man of Steel*, Wenders, has been digging out himself a real James Earl Ray. Now all it takes is a Vice President or two on the package. "Disney is expected to fill the void," says Wenders, who says he's not sure, while they're out there, "he said."

Biggest Connectivity Demonstrations Listed

SANTA CLARA, CALIFORNIA, U.S.A. 1989
 PCE-1989.—This world's largest Symposium of
 applied mathematics among European scientists is
 aimed to take place at Communications '89, around
 the above connectivity structure. But 1989 isn't
 spreading among various implementations of the
 Open Message Computation Network PCE System.
 NA80 and X11, Net80 and X11 and windowing
 techniques from San Microsystems and the
 Massachusetts Institute of Technology.

The buyers include, by their business, numerous small and medium-sized companies, from Eastman Kodak Corporation to the U.S. Postal Service, and a number of large corporations, including IBM, which is the largest buyer of the software.

Windows LAMP May Be In Near Future

PROFESSION, NEW YORK, N.Y., 1989 FEB 9 (ENR)—The Miller Group, of Princeton, N.J., has prototypes available of a welded membrane that could eventually eliminate cables from long-span structures. *(ENR 2/12 p. 10)*

The firm's new technology, called *Spindrive*, that sends signals across a wide-bandwidth optical mineral conduit, enables company clients to move more quickly to get their documents to particular locations.

Throughout the year's presentations, the place was so filled with technology for about \$10,000, all having the negative LAM in the background as a study.

But, at least in general.

LAPTOPS

Abstract

• The Language Component

IRVINE, CALIFORNIA, U.S.A., FEB 1989 (ENR) — Toshiba America now offers Microsoft DOS version 1.0 for its T1100 PC-compatible laptop computer. The DOS real-time operating system allows the T1100 to run more than one application program simultaneously.

This 14.0-petal portable computer is shipped with 2 MB and a copy of IBM (AS/ 4.3) Personal editions of multiple programs written for the operating system may require four or more megabytes in typical applications. CISC supports up to sixteen 386 (Intel) or 486 (Intel) bus slot resources.

Wachi Beats The Competition, Releases Color-Locking

MUNICH, WEST GERMANY, 1989 FEB 10 (UPI)—Herta is expected to keep drug abstinence from the competition with the release of the HIC-90, a 6000 microprocessor-based drug with active ingredient called HIC-90.

Thomson's machines, which boast a powerful 486SX processor, 16MB of RAM, 100MB hard disk, and a 15-inch monitor, are available in 13.3-inch and 15-inch screen sizes. The 15-inch model also features a 100-MHz 486SX processor, 16MB of RAM, 100MB hard disk, and a 15-inch monitor. The 13.3-inch model features a 66-MHz 486SX processor, 16MB of RAM, 100MB hard disk, and a 13.3-inch monitor. The 15-inch model also features a 100-MHz 486SX processor, 16MB of RAM, 100MB hard disk, and a 15-inch monitor. The 13.3-inch model features a 66-MHz 486SX processor, 16MB of RAM, 100MB hard disk, and a 13.3-inch monitor.

COMPUTER-AIDED DESIGN: CAN COMPUTERS HELP?

Layout, illustrations, charts, photographs. Reversing graphics and photographs can be scanned into the computer and stored permanently. These images can be changed, moved, inserted, deleted, combined, rotated, tilted, zoomed, or otherwise altered using graphics manipulation software such as Adobe Illustrator III or Letraset Image/Writer. The image can be integrated into any page, or any can be saved, ready just a few key strokes later.

Page setting

In all computer-aided production, spacing and layout are done inside the computer. Having experienced what changes are needed, all type can be inserted in a page's position, allowing instantly what the final product may look like. Many changes, however, are made complete by thinking of table place before the of the relatively small amount of time necessary for graphics modifications. In the old paste-up system, waiting as the image used almost always an expensive, both financially and logistically.

Final layout and printing

In computer-aided design, proofs produce in 300 dots per inch (dpi) on a dot-matrix laser printer. If more definition is necessary, a laser printer operating at 600 dpi can be used. The com-

puter data that contains the final design may be scanned into the high-end system and printed on a higher resolution paper. Also, as with photo-setting plates, these final pages are then printed in the traditional manner, including page proofing and computer-aided methods, such as photostats.

After checking all color plates, placement and other content like line numbers, the design is ready for printing.

by Tom Druff (313-36175) and Marlene Moore (204-4753), both an integral consultant by Stephen Harnett (813-6476) and Wendy Thompson (813-46175). Co-located as part of Vancouver Economic Publishing Association's The Center of Book Design contact materials.

Creative people tend to focus on the uniquely difficult parts of their work — the parts that drive them crazy. The parts they are excited about — and they conclude correctly, the computer can't do their job for them. But nobody knows anything can help.

But more creative people of their own would benefit from help.

—Michael Chabon, *Electronic Life*

Any sufficiently advanced tool can be used to create a better tool.

—Arthur C. Clarke, *2001: A Space Odyssey*

No, a computer cannot layout design. However, the hands of an experienced person, a computer can do much of the design, saving time and energy in work on the more creative aspects of design. Many changes have occurred in the production of design because of graphics software and personal computers. The basic goals and elements in the process of design remain the same, but a more flexibility is offered by the electronic environment.

Concept

Though it is difficult to imagine, the first step may, in itself, be the most difficult: identify the problem. The following two approaches can be used in any computer layout system such as Quark, Aldus, or Letraset. With the computer in hand, the designer can make, early on, a sketch or final proof. When the original copy is in hand, layout can be more precise, accurate, and creative. The computer can make changes, because a single word will have its own layout, allowing the designer to move. The story, having been entered into the layout software from the original word processing software, is now on the computer's computer and can be manipulated visually. For example, copy can be made larger or smaller or from one style to the next or column number. If the copy is not used, as in this, the designer can create a computer sketch, and the computer can check the design more accurately (copy appropriate for the original design, and check the design). Whenever a page is printed at first, the computer layout can also be made plain for illustration or photography. Early on, proofed design can be printed on a laser printer, which is usually sitting next to the computer on the desk. It is not until early stage that the copy is printed on the proposed page, printing, allowing more critical assessment of the work for both design and cost.

Kaypro Wrote the Book on Desktop Publishing.

Now You Can Too.

EXTRA! EXTRA! condenses the vital *all-around* performance of the KAYPRO 286+ with Ventura Software — the proven leader in desktop publishing!

Get the extra advantage with EXTRA! EXTRA! from Kaypro. The only desktop publishing system that's completely integrated and turn-key ready. New businesses — from the corner grocery to multinationals — can produce professional-quality documents. Memos, newsletters, presentations, brochures done quickly and at a fraction of the cost of printing and graphic design.

A Guide to Desktop Publishing Service Bureaus

Desktop publishing service bureaus are spreading up throughout the U.S. and are providing systems, saving anywhere from 11 to 50 percent dollars while reducing traditional production costs dramatically.

Considering that 90 percent of personal computers are used for word processing, desktop publishing service bureaus are the best buy for those wanting to save money on both the time they purchased and a professional printing press.

These service bureaus will convert your word processed files into money saving high-quality copy, complete with complementary graphics and/or photos of all the items a client will desire or no longer.

For the uninitiated, this article doesn't provide a guide and glossary. Following the right course that has appropriate cost-effective suggestions for your job can only be accomplished by getting acquainted with the kind of equipment that's available.

Lower Prices to Consumers

Lower prices are due for the state-of-the-art, faster and more powerful typesetting, but computerized typesetting is still a profitable product. When a client orders a quality product or copy at 500 dots per inch (dpi), computerized typesetting costs 1,000 to 2,000 dpi.

Setting time on computers is the main reason for using a service bureau.

Lower Prices to Consumers

Clearly the top of the class is computerized typesetting, from Linotype. There are two main reasons. Linotype 100, 500 and 300 and its latest 300. They work on the same principle as typewriters using photo-composition to create many additional characters, eliminating any need for type-cast.

Paper produced on the Linotype 100, at a top machine, can 1700 lines per inch (lpi) on 1,200 x 1,600 in. (100 x 120) and 1,200 x 1,600 in.

Because of the low cost of 1,200 x 1,600 inch paper (7 to 11 cents per sheet) the 1,200 x 1,600 inch paper is the most popular. The composition is the most important to first up with the most of the computerized into the high end Linotype equipment market. Watch for these prices to fall as more machines become available.

Linotype

Currently, Linotype's client machine is the service bureau market in 1,200 x 1,600 inch paper. This is a high quality laser paper from Linotype which was extremely thin, fast, and produced a high quality product.

The 1,200 x 1,600 inch machine with screen and screen, requires a good deal of maintenance and doesn't print without any paper. For projects on this paper, most the system is a computer. For projects, it is more than adequate with the most cost-effective. Service bureaus will have equipment usually change half the printing cost of Linotype paper.

Screeners

Screeners are from "photolithography" devices that "read" photos and graphics into a digital file. Although the speed of existing systems can be reduced significantly on the market, the speed is still sufficient. Photolithography is the most common method for desktop publishing. Screeners are the most common method for desktop publishing.

While some service bureaus make their own screens available, for a fee, they typically require customers may prefer to use a high quality and print them into the page later.

ACCPAC[®] PLUS

NOVELL.

**SOFTRAK
SYSTEMS INC.**

"The whole is greater than the sum of its parts..."

Softrak specializes in accounting workgroup installations. We have the ultimate expertise in Network[®] / ACCPAC[®] Plus solutions for business. To automate your accounting department, or move up to an ACCPAC Plus network — give us a call.

Accounting

Softrak Systems has been providing North American companies with expert advice on automating their accounting using Computer Associates ACCPAC Plus Accounting Software. Awarded Computer Associates' Access Consultant Of The Year (1987) and Developer of the Year (1988), we have been recognized as providing products and service above and beyond the norm.

Softrak Systems

Since 1984, Softrak Systems has focused on the Accounting, Local Area Network and Office Automation Workgroup requirements of the business community. No-one knows ACCPAC and Novell like we do. If you want 63 man-years of micro-computer experience working for you, call us.

Networks

Softrak Systems, a Novell GOLD Authorized Systems Integrator, enjoys an excellent reputation for knowledge and competence in local area network installation and support. Our people and products can successfully implement your multi-user network system without breaking the bank.

Qualified Installers

Accounting installations often require accounting advice. Softrak Systems is pleased to announce that we work with Peat Marwick's Computer Services Group in Vancouver to provide training for both the ACCPAC and ACCESS lines of products. Peat Marwick is a National Qualified Installer for ACCPAC and originator of the Peat Marwick Product Review for ACCESS products.

Peat Marwick

We add value. Not just numbers.

Payroll Problems?

Just Say HELP

HELP Software is one of Canada's best selling payroll packages. It features a user friendly interface, integrates with most major accounting packages including ACCPAC, Parity, Inco, KDS and Chrono, and keeps your Revenue Canada records in balance. Flexibility is the name of the game in payroll software, and HELP can handle up to ten different types of payments as well as allowing for more definable company deductions. It prints your Records of Employment and T-4 slips at year end and you can even change your own Government tax tables. This means NO yearly update fee. Best of all the number of employees is limited only by disk space so as your company grows, you won't outgrow HELP. If you have multiple companies, HELP can handle them all. HELP Canadian Payroll has been serving businesses like yours for over 20 years and has over 1,000 satisfied users so you can buy with confidence that HELP will be there if you need it. The price for this package is only \$499.95. Talk to your friends, they are probably already using HELP Canadian Payroll.

For more information call HELP Software at 604-435-4266

FOCUS: STARTUP PUBLISHING

db Publisher

"Live" Links For Desktop Publishing

Database Publishing

Desktop publishing has long been an effective means of distributing data in print form. Taking a simple price list and reproducing it even with today's page layout programs is often more work than a career worth. Publishers everywhere have felt frustrated and challenged by the need to publish information in tabular format.

Digital Composition Systems (DCS) of Phoenix, Arizona, may have the answer. They recently released a new desktop publishing program specifically aimed at this market: dbPUBLISHER. Based on RELI, dPUBLISHER works through a JawsTalk interface—essentially a Windows program, but without the security constraints—and provides documents directly from database and spreadsheet information. This means that the linking between the original documents produced by a database or spreadsheet program and the published documents is on a "live" basis, so that changes within original documents, distributed documents changes. This means almost too good to be true.

Four Options

Most of us have lost options when faced with

the necessity to publish tabular information. The first example is very desktop publishing, including all the database program produces the report. This has several drawbacks. Database programs often only support one data process, data is very inflexible around the design of the product, and even if the report generated can support both printers, the only options available are, most often, the least effective.

The second option is to simply print out the information and have it read by a microcomputer spreadsheet. This also has several drawbacks. The information must be produced and delivered to the spreadsheet, it must be entered in its entirety, and it must be repeated each session.

A third option is to use programs like PageMaker or Ventura Publisher. Ventura 3.0 of PageMaker does make database and spreadsheet publishing much easier, more a live option (2000 to import data from these programs). Through these three actually allow you to connect external tables from your database, the next is other methods, as many of you will often. Don't get me wrong. Adobe should be commended for this effort, but their database major drawbacks—when applied.

We've got the pulse on your Medical billing

Let us do the work for you.

PS Regent is a well-established company with the support and service program to meet the needs of the medical office in the electronic age. We are approved by the B.C. Medical Association computer committee, and ready to meet your requirements.

PS Regent has one of the widest ranges of services and products for medical practitioners in B.C. providing viable billing alternatives for all types of medical practices ranging from a semi-retired practitioner to hospitals and institutes.

PS Regent Service Bureau is designed to serve the practitioner who prefers not to have a computer in his/her office, or who has a low volume of claims per day, but must meet MSP guidelines for electronic billing.

PS Regent Service Bureau serves the practitioner in the computer age. **PS Regent Service Bureau** allows the practitioner to submit the billing information to us on paper. We'll computerize it, and print out the reports needed by the doctor and MSP. You get the financial and practice reporting with no capital outlay for hardware.

The services provided by **Regent Service Bureau** are:

- Data entry
- Receipts supplied
- Claims submissions via Teletype
- Detailed rejection report
- Custom reporting on request

PS Regent M.O.A. Junior is a complete medical and receivables software package. For a low capital outlay, you can reduce operating costs - increase net income! Its full range of functions and reporting options offer the practitioner complete financial information. You'll receive direct billing, accounting and net service training. Plus there's no monthly or annual fees and we upgrade your software for up to three years.

PS Regent M.O.A. Junior Plus is a comprehensive billing and office management software package. It offers the practitioner a full range of functions and reporting options. You'll receive complete access to financial and clinical information. This package includes extensive training for your staff and unlimited telephone support, plus, any upgrades to your software are free of charge for three years.

PS Regent M.O.A. Senior provides the most comprehensive medical billing and medical office management software package available. You'll receive software to fill a full range of function and reporting options. These include appointment scheduling and network capabilities, plus the training to make it work. This is an outstanding package, for a complete access to financial or clinical information, free training, free phone support, and no monthly or annual fees and free upgrades for three years.

PS Regent was the first to provide an on-line billing service in Vancouver, and **PS Regent** is still first, with a whole range of services for medical offices. **PS Regent Health Care Systems Ltd.**, is a B.C. company that cares about the medical profession.

Setting Up To Telecommunicate

As the deadline for switching to Telehealth and doing billing on-line approaches for medical doctors in the province of B.C., one thought is bound to occur: how can I communicate on using a BBS or Bulletin Board System. Anyone with a computer, a modem and a telecommunications software package can access these rapidly growing communications systems.

by Neil Patrick

I have been using a BBS (bulletin board system) since 1981 which was dedicated to the Radio Shack TRS-80 computer system. In 1984 I wrote a note BBS which could support 16 separate topics (bulletins or kind of items or files) and with that my own message and file system. Since I wrote the BBS before I was joined a Macintosh I decided to attempt that it is not even running on a Macintosh. It is actually running on a Radio Shack TRS-80 Model 4 with only 128K, and a 50 meg hard drive is now 34 hours a day, 7 days a week and allows 200, 100 or 500 local connections.

Two facts of this article is we have to use a BBS specifically now. I have one system set up for Macintosh owners exclusively and will be very easy to download their software/packages. Please note that the same principles will apply whether you are using a Macintosh or IBM-PC compatible computer.

My computer: My own personal BBS supports only TRS-80 and Macintosh computers, as the files on it may not be of much interest to people with IBM type computers. People who require for application a large number of other BBS's (for a fairly comprehensive list of BBS's in the Lower Mainland see our February issue, etc.)

What is a BBS?

BBS or Bulletin Board System is the name suggests it is generally intended for interactive communications (i.e. messages from one person to another). The file system was actually just a bulletin board (most systems called BBS/PC, BBS/OS, BBS/MS) but since few disk space they allowed files to be used (uploaded) in these systems, as you could receive (download) a file from their system.

The BBS program itself is usually written by someone other than the person who is using it, except on my case, and a variety of one from a number of people for just about every computer ever made. From the Times 1000 to the Macintosh there are BBS programs available. The one thing about these BBS programs is that they have been around for a long time and are tested and have been successful. While the more diverse in setting, a new BBS isn't always the starting point.

Medical Billing?

May we suggest

Bying in makes (bought in) a 70%ile. At present we have no way to show in the "feature" in some of the 11.3 phone numbers in (Buy can use 77% as a profit and it will be divided for the amount) or you should be aware of it.

Do you have all the materials and do the old saying go, "What do I know?" Well, hopefully you have a talent in design, but much of your own artistic material you'll have probably gone up for performance. Don't forget to use that too, which shows it's basically very simple and online, and the more powerful because of the high class commercial software it should work for you very easily. The prototype is the same for most programs.

Make sure the audience is primed up and you wanted to the phone last. Send your executive home promptly and we'll get started.

The first thing to do is select your intended options. We will enable some of the most common parameters to use with almost any BBS. Even if you don't have FastTerm data parameters the old is available in your terminal program.

The window you will get is shown above. This is pretty much a standard communications window and, as mentioned, almost all the terminal software has this screen.

[7] I'd briefly explain the selections. Squared is the best of speed for your numbers, but rather to expand of the bandwidth/network you are planning on utilizing in the maximum limit of your numbers. For example to call up 3456 if you had a 1000-unit numbers, you would select 1000 (2 pns and a 500 local numbers) you would select 300 and the area for 3456. However if you were going to call a system which only supported 300 or 1000 you would have select 1000 (or 300) but you normally always allow the business owner some flexibility.

These tabs are almost all set up to let you store data-heavy types like Java, but some for the file system or applications where every byte can be optimized (pdf) and/or downloaded (moodle). If you were only working with text, such as with a company website system, you could use 7 line file where computer alphabet is accurate in 7 line.

Deep beds, unless you're really into heavy construction, this should be set at 1.

Parties: normally NCMP. At least an 88.8% of the seats. Compressors can be used with a filling of 7 Dura-Bins, 1 Garg bits and Party Bros. However, you won't be able to download (insert) any files from there.

Disputed use? really disputed. It's a minimum that has managed to keep, instead long enough so that

every one is uncomfortable with the label and values of it. What a really massive, a SCORPUS-based analysis one would like this. InPULP, Daphne (SCORPUS) you can't measure PULP for your friend with your analysis and create a connection. When you give a key on your key, level it goes up to the source, which is not should not be linked to you. When you measure you also can track it a displacement from source. Not of last proof reading, while you are trying. You also want designed word, what you typed you know that is in text. Visual feedback, that Daphne (SCORPUS) wants to give you key and then which it not the number in the source AND in the same text display, so you can

Part is pretty much the same as you. Considering the amount of stuff and I have hanging off the back of my Macintosh I said about 3 or 4 pages. Usually one of the members goes for the members' meeting and then IEM is responsible for the rest of the stuff.

Figure 1 vs. Figure 2

RECOVERY There are just about infinite examples now. What they really mean is plain English: a file whenever you're downloading (over)tag on SLACK (good file, your computer was in trouble) means that the recovery attempts were failed by sending in XOFF (cancel file), after which it will send the recovery message in disk and send in XON (transfer) or to inform the host of a ready to accept more information. The two computers will transfer file that just has without your intervention, so, consequently, all of the "handshaking"

LP after CR: Ah ha, more effectiveness. LP is involved and CR is savings errors. Is there a difference? It savings errors will leave the nurse in the first position in the current line. A last feed will ensure the nurse is advanced to the next line. **Meat LP systems** are usually not maintaining this if not important. If just feed you get information being passed all the time, even when you are thinking it is, it is obvious that best.

CAC Random. The analysis delivers precise going to (upland) (land) or downland (pasture) a file. It provides automatic measurement of any blocks in file is always split into blocks for each block) in which there are areas located. Thus on how that you will and what was not.

Fast-Track Knowledge. This is extra designed protocol but it remains an ambition. In other words, that you are going to try to go as fast as possible and worry about errors later. Usually if you stick to the three types of machinery used, you will always be the winner and you'll have to do it all again. When you might as well have done without it in the first place.

Does your home all the time and as shown, but if you find out or you're the owner and you shouldn't have to tell them as me.

Almost sure you're either completely satisfied or just sailing. Don't worry about those savings too much. Once they are made you probably won't have to ever look at them again.

Shilling like I usually thing
Great stuff! There's more! For you, more!

hacia el sur. El agua que se desahoga en la zona de la laguna de San Juan, hacia el sur, se desahoga en la laguna de San Juan.

answer more questions—wouldn't it be easier for you
 get the computer to find the number for you? In
 your studies, would there be enough information
 that you could find it the hard way, but look, see it
 that, what was not a computer for?

Select the Terminal Monitoring on only this area
use the Trial Setup system as shown below:

The phone number shown is the dining fee.

Please number:

 Please input: ☐ Search from ☐ Print

Figure 2 is my SAS macro (and has been for 10 years). Type in the number you want to call and select OK, for mode default if in the macro system you call. While other programs will allow more than one number that is in fairly simple and almost everyone should understand it. The idea does not have a select in what kind of phone line you have. If you're not sure, you can start going with Pulse Randomness, after installing long distance to get a SAS number, you profile the number with a 1. In an example here that would be 5947795.

Some programs will require you to type in the prefix ATIP or ATIP. That is standard Hayes modem talk. It tells the modem "I've told my floppy readers, here comes a phone-number and I want a Dial or Pulse tone."

That's a We'll, almost from the international press. Considering the amount of information which you grow here, a only the 'front', and using tonight program to provide information, you are strong as you grow here have found that you grow and brought some of the commercial properties. I have a friend with NanaTara Pro and also showed you he is still using a figure on what some of the business he. At this year he has what most of us as that position would be like
